

Atrius® Personal Wayfinder

Platform Accessibility Status | June 2021

Atrius is committed to providing accessible, inclusive applications and software development kits (SDKs) enabling solutions and experiences which can be accessed, understood and used by all people. This commitment includes making content accessible to people with vision or hearing impairment and loss, learning disabilities, cognitive limitations, limited movement, speech disabilities, photosensitivity and combinations of these.

To achieve this goal, Atrius adheres to the Web Content Accessibility Guidelines (WCAG) 2.0 Level AA to the extent possible, per guidelines in Section 508 of the Rehabilitation Act. Newer WCAG standards as well as EU Accessibility Directives and Acts inform the evolving development and enhancement of the Atrius platform and its products.

At our core, Atrius user experiences embody the principles of WCAG design that content must be perceivable, operable, understandable, and robust.

Further, the Atrius platform incorporates additional accessibility considerations for all people navigating complex indoor spaces, with the continued development of features such as a toggle to avoid stairs and escalators in wayfinding to a destination.

Atrius is invested in our customers' ability to embed accessible tools into their existing ecosystem. The Personal Wayfinder SDKs and other modes of interaction can be integrated into specific accessibility-focused programs that our partners and customers develop and launch for their end users, such as voice-powered chatbots.
