Personal Wayfinder Parking Map Module Overview

The following describes the map content and points of interest (POIs) included in the Personal Wayfinder Parking module.

1. Visible Map Features

- a. All publicly accessible parking garages and lots
- b. All publicly accessible levels of parking garages
- c. Parking zones within each level of each garage/lot
- d. Individual parking slots and other painted striping as non-interactive display elements
- e. Non-public spaces delineated as “non-accessible”
- f. Shuttle/train routes for navigating from one location to another, where applicable
- g. Major roads connecting the parking garages and lots

2. Map Interactions

- a. Zoom In/Out
- b. Pan
- c. Rotate
- d. Pitch adjustment
- e. Routing to/from all POIs in the garages/lots as walking directions, as well as shuttle/bus/train routes between the terminals and parking garage/lots, where applicable

3. Mapping Exclusions

- a. Individual parking slots as searchable/tappable points-of-interest (POIs)
- b. Driving directions to, from and within parking garage/lots
- c. Parking garages/lots located at a great distance from the venue. Atrius will work with the customer to determine what specific limitations may exist.

Points of Interest (POI) Content

1. Searchable and Tappable POIs Include:

- a. Parking Garages/Lots – These POIs include a description, photo(s), URL, hours, and searchable keywords.
- b. Parking Zones – Subsections of the parking garages/lots. These POIs include a description, photo(s), URL, hours, and searchable keywords.
- c. Services – Services and amenities within the parking garages/lots, e.g. rideshare pickup zones, EV charging stations, vending machines, AEDs, taxi pickup zones, etc. These POIs include a description, photo(s), URL, hours, and searchable keywords.
- d. Vertical circulation – Elevators, escalators, stairs, and ramps used to traverse parking garage levels.

Personal Wayfinder Parking Map Content Requirements

1. **The following conditions must be met in order for parking map content to be included:**
 - a. CAD data or equivalent files must be provided to Atrius for each level of each garage/lot that include level-of-detail outlined in Visible Map Features.
 - b. POI definition session to be scheduled to align on data provided and use cases. This session will be used to determine the level of granularity for parking zone POIs to ensure Personal Wayfinder performance and to avoid disruption to the in-terminal map experience.

Personal Wayfinder Parking Map Service Level Agreement (SLA)

Map and point-of-interest (POI) content updates will be available regularly and automatically downloaded via the Personal Wayfinder SDK. Atrius will respond to content update requests for all POI and wayfinding information submitted through the Venue Management System (VMS) or to content@atrius.com within 24 hours on U.S. business days. A response will be a resolution of the request or a request for additional information.

Major map content update requests, such as the addition of new facilities or the remodel of existing facilities, may be requested via the VMS or content@atrius.com but are subject to longer turnaround times. Atrius will work with the requester to source the necessary information and communicate a timeline after evaluating such updates. Major changes to the scope or granularity of parking zone POIs within garages/lots should be reviewed with the Atrius content team before implementation.

Atrius cannot guarantee any degree of external location data accuracy, and does not offer support troubleshooting issues with external location data or accuracy of the rendered position during a wayfinding scenario.

For Map Syndication customers, Atrius does not guarantee representation of the map content outlined in the Visible Map Features or Searchable or Tappable POIs in third party applications.

Visit <http://www.locuslabs.com/specs> for updated Atrius product specifications.
