

Automated Emissions Reporting

Accelerate your sustainability journey

An essential part of meeting **sustainability targets** is having reliable, accurate, and real time insight into overall energy and resource consumption. Accelerate progress towards reduction goals with a trusted platform that serves as the **single source of truth** for building performance.

Atrius Sustainability takes away the manual processes associated with **energy and sustainability reporting**, giving leaders more time to focus on strategic activities to meet and exceed their goals.

Features & Benefits

- ✓ **Automated carbon accounting:** Recover time for mission-critical tasks by allocating scope assignments across all your data points.
- ✓ **Annual emission factor assignments:** Set annual emission rates to easily download for year-end reports.
- ✓ **Comprehensive emissions library hub:** Includes all scope 1, 2, and 3 emission factors from UK DEFRA, IPCC, eGRID, GHGP, and EPA.
- ✓ **Increased visibility into total emission outputs:** View portfolio-wide emission trends and efficiently replicate reports from the roll-up summary.
- ✓ **Standardized reporting:** Centralize emissions, waste, water, and energy outputs in a single format to meet CDP, GRESB, SASB, and TCFD requirements.
- ✓ **Meter-level scope assignments:** Set your emissions factor at the meter level to support market and location-based scope 2 requirements.
- ✓ **Meet IPCC reporting standards:** Assign Global Warming Potentials (GWP) at an annualized frequency for rolled-up CO2E calculations that support IPCC versions 2.0, 4.0, and 5.0.

Sustainability Use Cases

Real-time, accurate carbon emissions data: Continuously monitor progress on your sustainability journey with all your historical and real-time emissions, utility, and resource data centralized in one platform.

Streamlined reporting: Access greenhouse gas (GHG) emissions, energy consumption, utility data, and emission data critical to tracking and accomplishing corporate sustainability goals.

Automate manual processes: Remove the hassles and time-consuming tasks of managing spreadsheets—track real-time and historical data; create trends and forecasts in minutes.

Share & engage: Provide stakeholders across your organization an accurate picture of progress towards reduction goals with easy-to-read, visually intuitive dashboards and storyboards.

Included with Atrius Sustainability

- ✓ Calculated meters
- ✓ Manual meter & bulk upload tools
- ✓ Dashboards & Storyboards
- ✓ Data Management
- ✓ EMIS Applications
- ✓ Emissions Engine
- ✓ Finance & Planning
- ✓ Project Measurement and Verification
- ✓ Baselines and Forecasts
- ✓ Real-Time Alerts
- ✓ Asset Management
- ✓ Resource Analytics & Reporting
- ✓ Utility Rate & Tariff Engine
- ✓ Energy Star Portfolio Manager
